I. IMPORTANT SAFETY INSTRUCTIONS

● Operating Voltage Range:

- The operating voltage range is 187V~254V. To avoid damaging the electrical performance of the compressor, please use a Voltage Stabilizer appliance with a power rating of not less than 500W to protect the Cooler when the voltage is lower than 187V or higher than 254V.

● Electrical Socket Requirements:

- Use an individual single-phase socket reliably connected to a grounding wire.
- Power cord is Type B 3-prong.

 **CAUTION** The grounding wire must not be connected to a water pipe or a gas pipe.

● Prohibited Items:

- Do not store strong base, strong acid, organic solvent, corrosive goods, or items that are prone to polluting food in the showcase, as it can cause corrosiveness or accidents.

● Handling Caution:

- Avoid raising the showcase or the shell of the electric parts, as it may result in insulation decline and corrosion.

● Long-Term Storage:

- When the show case will be out of use for a long time, disconnect the power first, then clean it. Please examine the circuit to ensure it is functioning properly before reuse.

● Damaged Supply Cord:

- If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.

● Disconnect During Maintenance:

- The appliance shall be disconnected from its power source during cleaning or maintenance and when replacing parts.

● Noise Level:

- The A-weighted emission sound pressure level is below 70Db(A).

● Explosive Substances:

- Do not store explosive substances such as aerosol cans with a flammable propellant inside the appliance.

● Fire Risk Warning:

- Take care to avoid causing a fire by igniting flammable materials.

● Disposal Instructions:

- Please comply with local regulations regarding the disposal of the appliance and its flammable blowing gas. Before scrapping the appliance, remove the doors to prevent children from getting trapped.

● **Ventilation:**

- Keep all ventilation openings in the appliance enclosure or in the structure for building-in clear of obstructions.

● **Defrosting Caution:**

- Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

● **Refrigerant Circuit Caution:**

- Do not damage the refrigerant circuit.

● **Electrical Appliances:**

- Do not use electrical appliances inside the food storage compartments of the appliance unless they are of the type recommended by the manufacturer.
- Do not use an adapter.

REFRIGERANT SAFETY INSTRUCTIONS DANGER

We strongly recommend that any servicing be performed by a qualified individual.

- R290 refrigerant, this gas is natural gas with high environmental compatibility that is, however, also combustible. When transporting and installing the appliance, care should be taken to ensure that no parts of the refrigerating circuit are damaged.
- Refrigerant squirting out of the pipes could ignite or cause an eye injury. If a leak is detected, avoid any naked flames or potential sources of ignition and air the room in which the appliance is standing for several minutes.

The ambient temperature and humidity conditions of the show case climate class following the tab below:

Test Room Climate Class	Dry Bulb Temperature (°C)	Relative Humidity (%)	Dew Point (°C)	Water Vapour Mass in Dry Air (g/kg)
0	20	50	9.3	7.3
1	16	80	12.6	9.1
8	23.9	55	14.3	10.2
2	22	65	15.2	10.8
3	25	60	16.7	12.0
4	30	55	20.0	14.8
6	27	70	21.1	15.8
5	40	40	23.9	18.8
7	35	75	30.0	27.3

NOTE: The water vapour mass in dry air is one of the main factors influencing the performance and energy consumption of the cabinets. Therefore, the order of the climate class in the table is based on the water vapour mass column. Refer to Annex B for comparison of lab and store conditions.

 - Installation should be carried out by a qualified professional to ensure proper setup and to reduce the risk of fire hazards.

IV. INSTALLATION INSTRUCTIONS

1. Unpacking and Cleaning:

- Remove all packaging materials and clean the cabinet using warm water with 5% neutral soap. Dry the cabinet thoroughly with a soft cloth. For glass parts, use specific products recommended for glass cleaning to avoid leaving limestone residues.

2. Placement and Distance:

- Maintain a minimum distance of 10 cm from the wall. Ensure the unit is level by adjusting the feet accordingly.

Note: Product Space Demand Size Schematic Diagram

3. Surface and Heat Source:

- Install the cabinet on a perfectly even surface, avoiding placement near any heat sources, including direct sunlight.

4. Protection from Elements:

- Do not install the unit in open areas or expose it to rain.

CHOOSING THE INSTALLATION LOCATION

The unit is intended for indoor application only. Due to its glass door, the unit's performance can be significantly affected by environmental conditions. To minimize these effects, please consider the following recommendations:

Avoid Heat Sources: Place the unit away from any heat sources.

Avoid Air Streams: Keep the unit clear of air streams produced by ventilation fans, open doors, or windows.

Avoid Roof-Mounted Ventilation: Do not position the unit under a roof-mounted ventilation system.

Provide Adequate Space:

Ensure the unit has sufficient space for ventilation, particularly at the rear, to allow for proper airflow.

Avoid Direct Sunlight: Position the unit away from direct sunlight to prevent overheating.

**Clear Ventilation Openings:**

Ensure all ventilation openings in the appliance enclosure or structure remain unobstructed.

Professional Installation: To reduce fire hazard, only a suitably qualified person should carry out the installation of this appliance.

BEFORE USING THE UNIT:

- Remove the exterior and interior packing.
- Before connecting the unit to the power source, let it stand upright for approximately 4 hours. This will reduce the possibility of a malfunction in the cooling system from handling during transportation.

LEVELING THE UNIT

1. Placement:

- Position the unit at the chosen location.

2. Check Level:

- Using a spirit level, verify if the unit is leveled in both directions. Place the spirit level on one of the shelves.

3. Importance of Leveling:

- It is essential to ensure that the unit is leveled during operation. This helps prevent possible ice formation on the evaporator's fins due to insufficient drainage of condensates.
